ARPAN ROY

+91 6291189415 | arpanroy0506@gmail.com | GitHub: https://github.com/arg0506

Web3 and AI builder focused on decentralized applications, DeFi, payments, lending, and blockchain ecosystems. Hands-on experience designing and building Web3 products, with ecosystem involvement across Stellar and Midnight. Founder of Nakshatra Coding Club and organizer of a college hackathon, combining technical development with community leadership.

EDUCATION

Government College of Engineering and Leather
Bachelor of technology in Leather Technology *Oct. 2025– Aug. 2029*

EXPERIENCE

Ambassador
Stellar development Fiundation july. 2026 – present

- Contribute to Stellar ecosystem growth through developer and student community engagement.
- Support awareness of blockchain development, ecosystem opportunities, and builder initiatives.

Lead
AWS student builder group-GCELT Aug. 2026 – july. 2027

- As a Lead at the AWS Student Builder Group, GCELT, I focus on building a strong tech community by organizing technical workshops, encouraging hands-on learning, and helping students explore AWS cloud technologies, AI, and emerging innovations. I lead student initiatives, foster collaboration, and empower aspiring developers to build real-world projects.

Ambassador
Midnight July,2026 – present

- Represent Midnight on campus and promote awareness of its privacy-focused blockchain ecosystem.
- Create and share educational content about Midnight, Web3, and privacy-preserving technologies.
- Organize and support campus and online events, workshops, and community initiatives.
- Engage with students, developers, and blockchain enthusiasts to grow the Midnight.

PROJECTS

Automa
Automa is a Web3 project building financial infrastructure that allows autonomous AI agents to receive, hold, and spend digital assets under programmable rules and human-defined controls.The vision is simple: AI agents should be able to do work and pay for the resources they need without requiring humans to approve every individual transaction.Automa provides the financial layer that makes this possible, combining crypto wallets, spending policies, transaction execution, and monitoring into a unified platform.

Vertex
Vertex is a decentralized exchange built on the Stellar Development Foundation ecosystem, designed to provide users with a streamlined, accessible, and efficient on-chain trading experience.

SKILLS

Technical Skills: Blockchain & Web3 (Ethereum, Stellar, Midnight, DeFi, dApps); Smart Contracts (Solidity, Soroban); Frontend Development (HTML, CSS, JavaScript, React.js, Next.js, Tailwind CSS); Backend & Databases (Node.js, Firebase, Supabase, REST APIs); Wallet Integration (MetaMask, Freighter); Programming Languages (JavaScript, C, Python); Tools (Git, GitHub, Vite, Hardhat); AI × Blockchain Integration.
